

Simon Cheng

Product Engineer | Full-Stack Builder

Melbourne, Australia | 0416481373 | helloworldsimon@gmail.com | LinkedIn

Professional Summary

Full-Stack Product Engineer with 5+ years of software engineering experience in Australia. Fast-tracked through 2 promotions from Junior Developer to independently owning a company-wide pricing management platform across complex e-commerce systems. Strong in backend services, system integrations, and pragmatic frontend delivery, while leveraging AI-assisted workflows to accelerate delivery speed and software quality. Proven ability to measurably improve business workflows and user experience.

Key Skills

FRONTEND

JavaScript, TypeScript, React, Redux
Toolkit, Vite, IBM Carbon Design
System

BACKEND

Node.js, Express, PHP, Zend
Framework, REST API design, System
Design, Performance Optimization

DATA & DEVOPS

SQL, PostgreSQL, MySQL, MongoDB,
Prisma, Docker, CI/CD, Bitbucket
Pipelines, Git

Professional Experience

AI Workbench

Node.js | TypeScript | Express | Gemini API | Custom Retrieval Framework

- Built the backend integration for an internal AI assistant on Gemini, including a custom retrieval framework feeding company SOPs and pricing rules directly into the model.
- Replaced near-daily one-off IT requests from the Category and Channel teams with a self-service AI assistant, giving non-technical staff direct access to pricing rules and company knowledge without needing database access or engineering support.

Pricing Management Platform

Node.js | TypeScript | Express | Prisma | PostgreSQL | Monorepo (14 services) | Claude Code (Claude Sonnet)

- Designed and built the pricing engine, inventory-aware recommendations, and promotion framework across 35+ sales channels (Amazon AU, Woolworths MarketPlus, eBay), using AI-assisted development (Claude Code with Claude Sonnet) to accelerate delivery across a 14-service monorepo.
- Optimized the high-frequency pricing engine, slashing core sync workflow latency by 80% while resolving critical concurrency bottlenecks.

Channel Management System

TypeScript | Express | Prisma | PostgreSQL | React | Vite | Docker | Cursor (GLM)

- Independently designed and delivered a channel master-data platform for profiles, commission structures, and sales analytics, leveraging AI pair-programming (Cursor with GLM) to speed up delivery end to end.
- Consolidated previously scattered channel contacts, ownership details, and integration info with category-level sales data into a single system, giving leadership clear visibility into channel performance and ownership.

Zendesk Integration

Node.js | Express | Zendesk | REST API | Integration Middleware | GitHub Copilot

- Designed the integration architecture and delivered 50+ REST API endpoints for ticket creation, updates, merging, search, and export, using GitHub Copilot's autocomplete to speed up boilerplate and endpoint scaffolding.
- Built a tag-based classification layer unifying chat, chatbot, and email messages from 40+ channels into one ticket pipeline.

After-Sales Management System

PHP | Zend Framework | MySQL | MongoDB | Google Drive API | REST/OAuth

- Owned the backend architecture for a full-lifecycle ticket platform, translating requirements from finance, warehouse, and support teams into the approval workflow.
- Implemented PayPal/bank-transfer refund pipelines with financial checkpoints and MongoDB full-text search plus exportable reporting.
- Enabled the support team to handle 25% more tickets daily with the same headcount.

Warehouse Return APP

React | Redux Toolkit | Axios | IBM Carbon Design System | OMS/SMG APIs

- Built the frontend and OMS/SMG integration layer with barcode/tracking scanning, photo evidence capture, and submission for warehouse return processing.
- Added camera-based SKU recognition and validation logic across four return paths (restock, second-hand, dispose, QC/NCR), giving warehouse staff instant product identification and routing decisions that cut manual processing time and increased daily throughput.

Work History

New Aim

Apr 2021 - Present

Melbourne, Australia

Junior Developer

Apr 2021 - Jul 2022

Joined as a graduate, learned the sale-message system architecture, and was promoted within months to independently own the company's first channel integration into the sale-message system (MyDeal).

IT Engineer

Jul 2022 - Jul 2025

Promoted to independently own the company's return and after-sales ticketing systems, then to unifying every channel's customer-service conversations into a single Zendesk-based support system.

Product Engineer

Jul 2025 - Present

Promoted to independently own the company's pricing systems — moved from integration delivery into product-level engineering ownership, leading the pricing engine and channel master-data platform.

SACC

May 2014 - Apr 2019

Shenyang, China

Aircraft Strength Design Engineer

Designed and analyzed major commercial aircraft body structures; conducted static, fatigue, and damage tolerance analysis for structural safety and performance.

Education & Certifications

- RMIT University (2020 - 2021), Information Technology
- Harbin Engineering University (2008 - 2015), Master, Mechanical Engineering
- Professional references available upon request
